# SmartAging

SmartAging explores how to improve indoor environments in assisted living through sustainable, inclusive, and environmentally responsible design. The project develops and tests long-lasting, adaptable solutions using bio-based materials, while contributing to the education of future professionals such as designers, architects, engineers, and care specialists.

**This #MadeWithInterreg project** helps drive the transition to a green and resilient Baltic Sea region.

Organisations from the following countries cooperate together to make that happen:

Finland, Germany, Poland, Sweden
